PROJECT MANAGEMENT

RISK MANAGEMENT IN PROJECTS (PRM)

8 hours
Virtual or in Person
8 PDUs

(VCT: 8 Technical, 0 Leadership, 0 Strategic PDU)

One of the most crucial elements for success in projects is the ability to handle risks.

This course will give you the knowledge, practices, and techniques for a well-balanced and effective risk management to make a difference towards the successful outcome of your projects.

You will learn how to plan and execute your project better from a risk management point of view, regardless of the project type, the size, complexity, or the duration.

In this course you will learn risk management step by step and the practical use of risk management.

AFTER THE COURSE YOU WILL

- Have increased your knowledge in managing risks in projects.
- Be able to plan, identify, analyze, respond to, and control the risks in your projects.
- Have the knowledge to manage risks in different types of projects: customer, internal or R&D projects,
- Have knowledge and skills that can be applied to real-life goal-oriented activities in general, not only projects.

TARGET GROUP

- Project and Program Managers
- Project team; Financial Managers, administrators, configuration managers, project planners, team members etc.
- Sponsors and Sales (Core 3) team members
- Line Managers

PREREQUISITES

Depending on the group.

An advanced group would need knowledge and experience in Project management, including the standards and a PM

TRAINING METHODS

- We apply a training method based on "learning by doing". This means optimizing your learning by combining the trainer's input with your own experience and active participation.
- The course can be a mixture between a training course and a workshop – thus work with real cases, to help the participants to use what they learn immediately afterwards.
- The course can also be delivered with more content for 16 hours.
